

Processing instructions for attaching the LED strip

Attaching the LED strip permanently can only be guaranteed if it is glued to a completely clean and grease-free surface and ensuring it is bubble-free and tight. Please continue as follows:

1. Cleaning the surface

- Wear clean gloves when preparing the surface.
- Use a soft, clean and lint-free cloth.
- Use a suitable surface cleaner to degrease and clean the surface depending on the dirt and material e.g., 3M™ cleaner for 3M™ VHB™ tape.
Rehydrating household cleaners such as dishwashing liquid or glass cleaner are unsuitable.
- Important: Always wipe the cleaning cloth carefully in the same direction.
This eliminates dirt and ensures that is not distributed over a large area.

2. Applying the LED strip

- Make sure the surface is completely dry before you start applying the glue.
- Adjust the LED strip to the desired position.
(Pay attention to connecting cable)
- Carefully peel off the protective tape on one end of the LED strip.
- Fix the exposed adhesive surface at the desired position.
- Carefully remove the protective foil step by step, while holding the LED strip, keeping it taut and promptly pressing it in the desired position.
- Attach the LED strip using a clean cloth and applying moderate pressure.

Maximum adhesion is achieved at room temperature 72 hours after attaching.

Important note: The above information is a representation of our experience and is not included in the specifications. Before using our products, please check whether they are suitable for their intended use. Please ensure that when using this tape, you follow all the applicable regulations.

Connecting the LED strip

Connect the red connecting cable to the positive pole and the black connecting cable to the negative pole of the power supply.
